# ICHIMOKU Trading by MARMOT

**CONTENTS**

**Introduction:**

When we invest in the stock market, we often wonder where the price will go or when the current trend will change. This is often a mystery to us and is presented as such in most publications.

Certainly, everyone has heard the phrase that we do not know where the price will go or when the trend will change. In most cases, we only know this after a correction and retest, but often it is too late and the profit is much smaller than expected, or even a loss occurs because we did not reach our target (the price did not reach our TP or another level we had set). A big problem for most investors is also whether to "exit" or "enter" now, or wait a little longer. Such dilemmas usually end with us not investing at all or entering/exiting too late.

The indicator that I have developed can help us decide at the right moment. The indicator works on all currency pairs such as **EUR**, **USD**, **CAD**, **CNH**, **GBP**, **AUD**, **NZD**, **CHF**, **JPY**, **IDR**, **MXN**, **NOK**, **HKD**, **PLN**, **RUB**, **BRL**, **SGD**, **SEK**, **THB**, **TRY**, **ZAR**, etc.

It also works on indexes such as **DJ30/500 (US)**, **SP500 (SPI)**, **USTEC (USTECH)**, **NAS100**, **STOXX50**, **EUR50**, **DAX (GER)**, **UK100 (FT100)**, **AUS200**, **HK50**, **CHINA50 (CN50)**, **NK225 (JPN225)**, **FRA40 (F40; CAC40)**, **IT40**, **SWISS20 (SWI20)**, **AFRICA40,** and so on.

It works on commodities such as **Coffee**, **Cocoa**, **Sugar**, **NATGAS**, **SOYBEAN**, **BRENT** (**OIL**), etc.,
and metals such as **Gold**, **Silver**, **Copper**, **Platinum**, **Aluminum**, etc.,
as well as on cryptocurrencies such as **BTC**, **ETH**, **LTC**, **BNB**, **BCH**, **XRP**, **XLM**, **ADA**, **AAVE**, **AVAX**, etc., and stocks.

Many times I have asked myself how the current political or economic situation will affect price behaviour. Now I do not worry about it anymore. I take these events into account, but they are not the most important part of my strategy.

Previously, I followed websites related to these issues. I listened, and read, and it took me a lot of time. Now, after developing the "Marmot" indicator, I only follow the most important events, because this indicator tells me where the price should go regardless of what is happening in the world.

Every price must reach a certain value before changing direction. I often followed this and noticed one regularity that the price must reach a certain point, which will be a "turning point", regardless of what is happening on the political and economic scene. Often, some "NEWS" released to the public aim to influence the exchange rate of a currency, index, or company's stock, but the price sooner or later reaches the level that according to the "Marmot", it should reach.
